technical specifications

| | 167kW/169kW, 3.2 litre High Performance Alloytec V6 engine | 110kW, 2.0 litre Variable Geometry Common Rail Turbo Diesel engine | | |
|--|--|---|---------------------------------|----------|
| Engine | 3.2L 60-degree Double Overhead Cam V6 with 4 valves per cylinder. Sequential fuel injection. High energy, distributorless ignition. Twin knock control sensors with individual cylinder adaptive control. On-board diagnostics. Electric cooling fan. Stainless steel exhaust. Low restriction air intake with acoustic dampening chambers. Continuously variable camshaft phasing for inlet and exhaust cams. Variable intake manifold. Coil-on-plug | In-line SOHC 16 valve 4 cylinder. Cast Iron block, aluminium head. Twin balance shafts to reduce vibration. Variable-Geometry Turbocharger for wider torque band. Charge Air Cooler. High-Pressure Common-Rail Direct Injection. Zero-maintenance Diesel Particulate Filter (DPF) | | |

| All Wheel Drive (AWD)* | The All Wheel Drive system is 'Active Torque On Demand'. An electronically controlled electro-hydraulic differential ensures the best possible torque distribution between the front and rear axles. As driving conditions dictate, the rear axle is employed via an electronically controlled electro-magnetic coupling to give increased traction. The torque split ratio between front and rear wheels is variable in real time depending on the driving conditions | | | |
| Brakes (mm) | Four wheel disc. Ventilated discs – front and rear | | | |
| front diameter | 296 | | | |
| rear diameter | 303 | | | |
| Anti-lock Braking System (ABS) | 4-channel, 4 sensor | | | |
| Traction Control System (TCS) | When sensors detect imminent wheel spin, engine torque is reduced. If one wheel starts to spin, braking is applied to transfer torque to the wheel(s) with better traction | | | |
| Brake Assist (BA) | Provides additional braking assistance by allowing the driver to reach the ABS threshold sooner and therefore help to reduce stopping distances | | | |
| Electronic Stability Control (ESC) | Assists the driver in emergency situations by providing correction to the intended vehicle path, which may help the driver to avoid obstacles and reduce slides. This is accomplished via individual brake application and engine torque management control | | | |
| Descent Control System (DCS) | Utilises the active braking capability of the ESC to maintain a controlled speed when travelling down hill | | | |
| Active Rollover Protection (ARP) | ARP is designed to reduce the risk of rollover when lane changing and cornering; working in conjunction with the ESC system | | | |
| Suspension | Front: MacPherson strut, gas pressurised dampers, stabiliser bar Rear: Independent four-link, gas pressurised dampers, stabiliser bar | | | |
| Level Ride Suspension* | Self contained load-sensitive rear shock absorbers that automatically adjust to load and road conditions | | | |
| Steering | Rack and pinion power steering | | | |

| Service | The complimentary inspection is due at 3,000km or 3 months (whichever occurs first). The first service is due at 15,000km or 12 months (whichever occurs first) and then every 15,000km or 12 months (whichever occurs first) since the last service. Additional services may be required under certain driving conditions such as when towing (refer to owner's handbook) | | | |

* Maximum figures as per ECE regulations

^ Fuel consumption figures based on ADR 81/01 tests. These figures are provided to assist you in comparing the fuel consumption of Captiva with other vehicles. The actual fuel consumption will depend, however, on many factors, including your driving habits, the prevailing conditions and your vehicle's equipment, condition and use

* Not on 2WD models

† Not on SX Petrol
