

Diesel

Diesel fuel is already a great alternative when fuel prices are soaring, as fundamentally it's more fuel-efficient than petrol. This is because it has a higher energy density, meaning more energy can be extracted from diesel fuel and therefore higher mileage achieved. This makes the Holden Diesel Ecoline range a great choice for both city or country driving.

Diesel engines are engineered to deliver potent turbocharged performance. The exceptional amount of torque available at low revs adds to the driving experience, particularly when driving up hills, overtaking and towing.

All diesel powered Holden Captiva, Epica and Cruze Ecoline vehicles utilise common rail direct injection fuel delivery, one of the most important new technologies in diesel engines. It supplies diesel directly to each engine cylinder at constant high pressure, regardless of engine speed, which results in smoother, quieter running with higher power, torque outputs and better fuel efficiency.

The Holden Captiva, Epica and Cruze passenger cars are available with diesel engines.

Epica CDX

Comfort

- 2.0 litre 4-cylinder turbocharged Common Rail diesel engine (CDTI)
- 6-speed automatic transmission with Active Select
- Front and side impact airbags for driver and front passenger
